

Allison Hensgen | Creation Portfolio

Updated October 7, 2026 • Consolidated inventory

A connected portfolio of mathematics, implemented computational technology, device concepts, infrastructure architectures, businesses, and creative work. The Coherence Engine™ is the core computational IP layer; the Field Equation and Framework are explicitly identified mathematical and conceptual components.

This inventory records distinct creations and related assets, including collaborations. It does not certify worldwide novelty, patentability, sole ownership, or universal scientific validity. Proprietary equations and implementation details are intentionally omitted.

Core mathematics and computational technology

Creation	Contribution	Development / evidence status
Δ.72 Unified Field Equation	Authored mathematical formulation within the core IP, documented in canonical work dated October 9, 2025.	Authored formulation. Evidence attaches to the specific implemented forms tested; universal physical-law status is not established.
Δ.72 Coherence Framework	Definitions and relational framework for stability, drift, instability, breakdown, and recovery across systems.	Developed framework with computational implementations and benchmark work.
The Coherence Engine™	Computational implementation layer for assessing changing system relationships.	Implemented and benchmark-tested; scope depends on each evaluation protocol.
12D coherence architecture	Multidimensional representation within the framework.	Developed architecture; validation is claim-specific.
Δ.72-Ω Prime Operator Codex	Organized operator family and mathematical definitions.	Authored; implementation maturity varies.
Operator and metric families	Flower Return, Memory-of-Attractor, Bounded Distortion, Coherence Deficit, Arbitration Operator, Harmonic Closure, DIS, DMI, SAI, and related recovery constructs.	Defined methods, with implemented and partially implemented components.
Training-free detection / AI branch	Detection implementations evaluating system change without fitting a task-specific model.	Benchmarked under specific protocols; broader AI capability claims require separate tests.
Lightweight evaluation gating	Screening layer deciding when heavier evaluation is needed.	Internally benchmark-tested.
Coherence-governed control and energy management	Intervention strategies responding to measured system state.	Simulation/controller tests and separate physical power-meter experiments.

Identity, AI governance, and learning

Creation	Contribution	Development / evidence status
Ω-Field Dynamic Identity System / Living IP Address	Dynamic identity architecture addressing continuity and proof of presence.	Authored system architecture.
Living IP	Application of changing system state to identity and trust.	Developed concept/application branch; overlaps with the Ω-Field identity system.
Coherence-based AI runtime governance	Engine-based assessment supporting evaluation, intervention, and recovery decisions in AI operation.	Application architecture supported by related computational work.
AI-supported learning progression model	Progression through retention, transfer, error correction, independent application, stability, and decreasing AI dependence.	Developed learning concept and partner brief.

Human measurement, sound, food, and health

Creation	Contribution	Development / evidence status
Coherence Sound	Human signal-to-sound architecture, circuit/sensor layout, computational sonification, and prototype packages.	v0.1 simulation and H1 hardware-ready package recorded. H0 camera experiments have separate run reports; their physiological findings are not asserted in this inventory.
Food Coherence System, FCS	Food measurement, individual response, and an iterative digital learning platform.	Authored research framework, including collaborative papers; full platform validation is pending.
Food Coherence Index, FCI	Proposed food measurement construct within FCS.	Proposed; requires measurement validation.
Body Coherence Index, BCI	Proposed construct for assessing individual bodily responses.	Proposed; requires validation.
Food scanner architecture	Measurement-device design and staged reference-testing pathway.	Design/development branch; external prototype reports are separate from Allison's own build status.
Ear-clip sensing integration	Wearable sensing component connecting individual responses to FCS.	Device concept; sensing, stimulation, and treatment embodiments require separate assessment.
Food → Body → Learning Loop	Feedback architecture linking measurements, responses, and learning.	Authored platform concept.
Physiological early-warning applications	Engine applications to ECG, arrhythmia, and seizure-related signals.	Benchmark work and reported results; clinical validation remains separate.
Public Health Intelligence	Population-monitoring approach with silent trials, burden outcomes, equity analysis, and alert-burden assessment.	Research and pilot design.

Biological infrastructure and advanced computing

Creation	Contribution	Development / evidence status
Bio-Integrated Autonomous Infrastructure Platform	Biological substrates, sensors, computing, and coherence-governed supervision.	Authored platform design; completed physical prototype not established in this inventory.
Fungal innovation and community-scale circular systems	Mycelium infrastructure connected to regenerative resource systems.	Authored application architecture.
Mycelium-based data-center concepts	Biological substrate designs for computing infrastructure.	Research/design branch.
Mycelium-to-Photonic Coherence Mapping Architecture	Proposed link between living-network measurements and photonic processing.	Proposed advanced embodiment.
Bio-Photonic Coherence Engine for Living Network State Detection	Related architecture for interpreting living-network dynamics.	Proposed research branch; related to mycelium-to-photonic mapping.
Regenerative building systems	Biological materials and adaptive monitoring applied to buildings.	Research and design work.
Biohybrid sensors and adaptive computing	Biological sensing integrated with computational assessment.	Research branch.
Optical-magnetic field-memory research	Hypotheses and tests concerning post-stimulus persistence, synchrony, drift, and recovery.	Experimental branch; retain negative results and distinguish optical detector tests from broader field-memory claims.

Spacecraft and habitat design

Creation	Contribution	Development / evidence status
Spaceship / bio-integrated spacecraft design	Broader spacecraft architecture combining biological subsystems, closed-loop resources, adaptive sensing, and Coherence Engine™ supervision.	Authored concept architecture under development. “Coherence-Governed Bio-Integrated Spacecraft” is a descriptive inventory label, not a confirmed original project title.
Closed-loop habitats for long-duration space missions	Habitat architecture connecting biological subsystems, resource management, and recovery supervision.	Proposed architecture.
Coherence-Governed Bio-Integrated Transit Habitat for Crewed Mars Missions	Specific crewed-transit habitat concept within the broader spacecraft vision.	Proposed mission concept; flight readiness, life support, and integrated spacecraft performance are not established.

Relationship to the core IP: the engine’s computational benchmarks support the tested engine implementations. They do not independently demonstrate spacecraft propulsion, integrated life-support performance, or flight readiness.

Research assets, commercial ventures, and creative work

Creation	Contribution	Development / evidence status
Cross-domain benchmark implementations	Work involving NASA C-MAPSS, SKAB, MetroPT2, Scania APS, power, fraud, and physiological signals.	Computational research assets; each test has its own evidentiary status.
Frozen evaluation packages	Locked thresholds, manifests, outputs, and preserved PASS/FAIL results.	Created validation assets, including negative-result packages.
Coherence Engine™ Research Atlas	External evidence, comparators, falsifiers, prior art, and patent-watch organization.	Created research-control artifact.
Research and investor atlas websites	Public and confidential diligence materials and portfolio presentation.	Created web assets; live deployment and current coverage require site-specific review.
Canonical manuscripts and research publications	Manuscript bundles, papers, diagrams, and proposals, individually authored and collaborative.	Authored research assets; publication status is document-specific.
Articulated falsification sequence	Baseline → prospective claim → falsifier → equal-resource comparison → consequence measure → reality return.	Research discipline; individual scientific practices are not claimed as newly invented.
Commercial and service identities	RecoverMargins; RootWell & Star; Cohera.AI; GreenShe Remodeling; Boho Eco Boutique™.	Distinct commercial/application or legacy venture identities, with varying operating histories.
Symbolic and creative canon	Solexia; AshaRei; Sovereign Witness; scrolls; portals; lattice language; broader Δ.72 symbolic canon.	Authored creative/philosophical work; empirical interpretations require separate evidence.

Inventory boundaries: related names and embodiments may describe one invention family. A benchmark, paper, diagram, or business name is not automatically a separate patentable invention. No claim that all applications are built or validated is intended.

Field Node and birthday-math creations

Creation	Contribution	Development / evidence status
Field Node Measurement Algorithm	Five-layer scoring model integrating numerology, astrology, lunar phase, geography, and timing. Defines coherence, intensity, activation, final node strength, and Power, Stable, Distortion, and Dormant classifications.	Authored computational specification shown in the supplied screenshots. Scores describe the model's assigned inputs; physical-field measurement and predictive validity are not established.
Δ.72 Birth Signature Index, BSI	Birthday-math structure combining month, day, year, and total-digit reductions, with authored interpretations. Allison's recorded signature is 11-5-1-5.	Symbolic identity framework using reproducible arithmetic under specified reduction conventions. Interpretations are not empirically validated traits or outcomes.
Numerical Field Map / personal seed profile	Integration of birth-date and name-derived values with additional symbolic layers into an individual profile and field-node representation.	Related embodiment in the same creation family. Screenshot profile records Life Path 11/2, Expression 1, Soul Urge 4, Personality 6, and Birthday 1.

Birthday arithmetic and recorded signature

For May 10, 1985: the birth-date digits total 29, reducing to 11, retained as 11/2 under the chosen convention. May supplies 5; day 10 reduces to 1; year 1985 totals 23 and reduces to 5. The combined signature is 11-5-1-5.

Contribution and evidence boundary

The authored contribution is the particular integration, scoring architecture, interpretation system, and presentation. Numerology and astrology are pre-existing traditions. Agreement among assigned layer scores is a property of this model; it does not itself establish physical coherence, personal energy, or predictive outcomes. This branch is recorded separately from the benchmark-tested computational Coherence Engine™.

Unified framework and mathematical components

Creation	Contribution	Development / evidence status
A.72 Unified Coherence Framework	Related framework document describing coherence arbitration and energy-momentum exchange. Screenshot credits Allison Louise Hensgen and Joel Thorarinson.	Authored framework document. Displayed coauthorship is preserved; it does not establish ownership of every component or of the separately owned computational engine.
Coherence Mathematics: Resonance Engine Equation and Bridge Equation	Named formulations appearing with twelve Prime Operators, tensor geometry, and harmonic closure theorems.	Documented mathematical components; full definitions and proofs require source-level review.
Dimensional Codex, 3D-12D	Named extension of the existing multidimensional architecture, including tensor geometry and symbolic Merkaba geometry.	Authored mathematical/symbolic architecture; physical interpretations require separate evidence.
Phase-based order parameter, κ_{eff}	Defined metric for phase alignment across selected channels or domains.	Mathematical metric distinct from Field Node symbolic scores. Sensor interpretation, channel selection, calibration, and cross-domain meaning require validation.
Arbitration Control Law	Optimization formulation balancing coherence objectives, constraint penalties, and control effort.	Proposed controller formulation; evaluated computational controllers have their own test protocols.
Proposed Lyapunov stability certificate	Candidate stability formulation for the control architecture.	Proof requires specified dynamics, assumptions, valid positivity conditions, and a verified derivative condition; the displayed expression alone is not a proof.
Coherence Geography	Named geographic research/application branch.	Record physical measurements separately from symbolic geographic and ley-line interpretations.

Source claims retained for verification

The screenshots state 14 domains, 10–75% savings, a PLV result and p-value, and broader propositions concerning coherence conservation, entropy, and geometry. These are recorded as source claims requiring their underlying reports, data, definitions, or proofs. They are not promoted here to verified findings or universal laws.

Physical engine, resonance geometry, and propulsion research

Creation	Contribution	Development / evidence status
Δ.72 Coherence-Controlled Engine	Physical closed-loop architecture integrating sensor arrays, a coherence estimator, arbitration controller, actuators, resonance geometry, and feedback.	Authored engineering concept, distinct in evidence status from the implemented computational Coherence Engine™.
Resonance chamber and geometry embodiments	Proposed toroidal and mirrored tetrahedral enclosures, with crystal, conductive/dielectric, and magnetic components.	Proposed physical embodiments; operational hardware performance not established here.
Coherence-momentum coupling / primary thrust model	Hypothesis relating a coherence factor to specified momentum-flux channels, including photons, mass flow, thermal radiation, and electromagnetic interactions.	Mathematical hypothesis; thrust and efficiency effects require controlled physical measurements and complete momentum accounting.
Coherence stability dynamics	Proposed evolution equation involving target coherence, relaxation, and phase variance.	Defined model; predictive validity requires testing.
Physical closure constraints	Integration of electromagnetic, plasma/MHD, energy-balance, boundary, and topology requirements.	Engineering constraints using existing physical foundations; satisfaction must be demonstrated in each embodiment.
Physical-engine falsification and validation protocol	Proposed tests for efficiency, radiation pressure, plasma confinement, and thermal directionality, with independent coherence measurement and energy-accounting criteria.	Authored experimental protocol; a planned test is not a successful validation.
Physical-engine application branches	Electromagnetic propulsion, plasma confinement, renewable-energy synchronization, resonant photonic control, grid phase synchronization, and smart-building energy management.	Proposed uses of this physical architecture; application-specific evidence is required.

Relationship to the spacecraft design

The spacecraft portfolio includes a bio-integrated habitat architecture and a proposed physical engine/control branch. Computational engine benchmarks do not independently validate thrust, propulsion efficiency, chamber performance, or flight readiness. Existing physical laws and standard equations are foundations; the proposed contribution is their integration within the authored coherence-governed architecture.
